E.A.6.5 (Schur's Lemma)

1.1 Modellazione

1.1.1 Variabili

Dato $n \ge 1$ siano

- $\mathcal{N} = \{1, 2, 3, ..., n\}$ l'insieme dei numeri da 1 a n
- $\mathcal{U} = \{1, 2, 3\}$
- $X = \{X_i^u \mid i \in \mathcal{N} \land u \in \mathcal{U}\}$ l'insieme di variabili t.c.
 - $-X_i^u$ è vera se l'i-esimo numero sta nell'urna u

1.1.2 Vincoli

$$\phi = \phi_{\text{totalità}} \land \phi_{\text{funzione}} \land \phi_{\text{aritmetica}}$$

$$\begin{split} \phi_{\text{totalità}} &= \bigwedge_{i \in \mathcal{N}} \left(\bigvee_{u \in \mathcal{U}} X_i^u \right) \\ \phi_{\text{funzione}} &= \bigwedge_{\substack{i \in \mathcal{N} \\ u_1, u_2 \in \mathcal{U} \\ u_1 < u_2}} X_i^{u_1} \to \neg X_i^{u_2} \\ \phi_{\text{aritmetica}} &= \bigwedge_{\substack{u \in \mathcal{U} \\ i, j \in \mathcal{N} \\ i < j \land \\ i + j \leq n}} \left(X_i^u \land X_j^u \right) \to \neg X_{i+j}^u \end{split}$$

In particolare

$$\begin{split} \left(X_i^u \wedge X_j^u\right) &\to \neg X_{i+j}^u = \\ \neg \left(X_i^u \wedge X_j^u\right) \vee \neg X_{i+j}^u = \\ \left(\neg X_i^u \vee \neg X_j^u\right) \vee \neg X_{i+j}^u = \\ \neg X_i^u \vee \neg X_j^u \vee \neg X_{i+j}^u = \end{split}$$

1.2 Istanziazione

1.2.1 Variabili

Dato n=5 si ha $-X=\left\{X_1^1,X_1^2,X_1^3,X_2^1,X_2^2,X_2^3,X_3^1,X_3^2,X_3^3,X_4^1,X_4^2,X_4^3,X_5^1,X_5^2,X_5^3\right\}$

1.2.2 Vincoli

$$\phi_{\text{totalità}} = (\\ (X_1^1 \vee X_1^2 \vee X_1^3) \wedge \\ (X_2^1 \vee X_2^2 \vee X_2^3) \wedge \\ (X_3^1 \vee X_3^2 \vee X_3^3) \wedge \\ (X_4^1 \vee X_4^2 \vee X_4^3) \wedge \\ (X_5^1 \vee X_5^2 \vee X_5^3) \\)$$

$$\phi_{\text{funzione}} = (\\ (X_1^1 \to \neg X_1^2) \wedge (X_1^1 \to \neg X_1^3) \wedge (X_1^2 \to \neg X_1^3) \wedge \\ (X_2^1 \to \neg X_2^2) \wedge (X_2^1 \to \neg X_2^3) \wedge (X_2^2 \to \neg X_2^3) \wedge \\ (X_3^1 \to \neg X_3^2) \wedge (X_3^1 \to \neg X_3^3) \wedge (X_3^2 \to \neg X_3^3) \wedge \\ (X_4^1 \to \neg X_4^2) \wedge (X_4^1 \to \neg X_4^3) \wedge (X_4^2 \to \neg X_4^3) \wedge \\ (X_5^1 \to \neg X_5^2) \wedge (X_5^1 \to \neg X_5^3) \wedge (X_5^2 \to \neg X_5^3) \\)$$

$$\phi_{\text{aritmetica}} = (\\ (X_1^1 \wedge X_2^1 \to \neg X_3^1) \wedge (X_1^1 \wedge X_3^1 \to \neg X_4^1) \wedge (X_1^1 \wedge X_4^1 \to \neg X_5^1) \wedge \\ (X_2^1 \wedge X_3^1 \to \neg X_5^1) \wedge \\ (X_2^1 \wedge X_3^2 \to \neg X_3^2) \wedge (X_1^2 \wedge X_3^2 \to \neg X_4^2) \wedge (X_1^2 \wedge X_4^2 \to \neg X_5^2) \wedge \\ (X_2^2 \wedge X_3^2 \to \neg X_5^2) \wedge \\ (X_1^3 \wedge X_2^3 \to \neg X_3^3) \wedge (X_1^3 \wedge X_3^3 \to \neg X_4^3) \wedge (X_1^3 \wedge X_4^3 \to \neg X_5^3) \wedge \\ (X_2^3 \wedge X_3^3 \to \neg X_5^3) \wedge$$

1.3 Encoder

```
import it.uniroma1.di.tmancini.utils.*;
import it.uniroma1.di.tmancini.teaching.ai.SATCodec.*;
import java.util.*;
public class SchursToSAT {
  public static void main(String args[]) {
    int n = 32;
    var numbers = new IntRange("numbers", 1, n);
    var urns = new IntRange("urns", 1, 3);
    var encoder = new SATEncoder("Schurs", "schurs.cnf");
    encoder.defineFamilyOfVariables("X", numbers, urns);
    // Ogni numero in almeno un'urna
    for (var i : numbers.values() ) {
      for (var u : urns.values()) {
         encoder.addToClause("X", i, u);
      encoder.endClause();
    // Ogni numero in al più un'urna
    for (var i : numbers.values()) {
      for (var u1 : urns.values()) {
        for (int u2 = u1 + 1; u2 \le 3; u2++) {
           encoder.addNegToClause("X", i, u1);
encoder.addNegToClause("X", i, u2);
           encoder.endClause();
      }
    }
    // Aritmetica
    for (var u : urns.values()) {
      for (int i = 1; i \le n; i ++) {
         for (int j = i + 1; i + j \le n; j + +) {
           encoder.addNegToClause("X", i, u);
encoder.addNegToClause("X", j, u);
encoder.addNegToClause("X", i + j, u);
           encoder.endClause();
         }
      }
    }
    encoder.end();
  }
}
```

1.4 Decoder

```
import it.uniroma1.di.tmancini.utils.*;
import it.uniroma1.di.tmancini.teaching.ai.SATCodec.*;
import java.util.*;
public class SATToSchurs {
  public static void main(String args[]) throws
java.io.IOException, java.io.FileNotFoundException {
    var decoder = new SATModelDecoder(args);
    decoder.run();
    int maxVar = decoder.getMaxVar();
    int n = maxVar / 3;
    ArrayList<ArrayList<Integer>> urns = new ArrayList();
    urns.add(new ArrayList<Integer>());
    urns.add(new ArrayList<Integer>());
    urns.add(new ArrayList<Integer>());
    for (int i = 1; i \le maxVar; i++) {
      Boolean v_i = decoder.getModelValue(i);
      if (v_i == null || !v_i) continue;
      SATModelDecoder.Var variable = decoder.decodeVariable(i);
      int number = variable.getIndices().get(0);
      int urn = variable.getIndices().get(1) - 1;
     urns.get(urn).add(number);
    }
    for (var urn : urns) {
      for (var number : urn) {
        System.out.print("" + number + ", ");
     System.out.println();
    System.out.println();
 }
}
```
